PROFILE

Backend-focused Computer Science student building Python APIs, automation tools, and data workflows for real users. Experienced with FastAPI, Flask, PostgreSQL, SQLite, SQLAlchemy ORM, authentication, Excel exports, and deployment-ready configuration. Strong at turning business rules into reliable backend systems.

EXPERIENCE

Freelance Backend Developer - Fiverr 2025-Present

- Built Python automation scripts and backend tools for external clients, translating business requirements into maintainable workflows.
- Developed API integrations, data processing pipelines, Excel exports, Mail Merge-ready datasets, and operations tooling.
- Delivered e-commerce automation with local persistence, duplicate prevention, and configurable production settings.

PROJECTS

Bol.com to DPD & Mail Merge Export Tool 2026

Python, SQLite, openpyxl, Excel generation, Bol.com order processing, Mail Merge

- Built a Python automation tool for Bol.com orders, DPD Excel exports, and Word Mail Merge customer data.
- Persisted orders in SQLite, filtered orders older than 7 days, marked exported orders, and added intentional re-export support.
- Added safeguards preventing mock data from contaminating production data; designed workflow around customer requirements.

Procurement Risk API 2025-2026

FastAPI, PostgreSQL, SQLAlchemy ORM, JWT, OAuth2, bcrypt, Swagger/OpenAPI

- Built production-style REST API for invoice retrieval, CSV ingestion, risk detection, analytics, and generated API docs.
- Designed PostgreSQL data model with SQLAlchemy and protected routes using JWT auth, OAuth2 Bearer tokens, and bcrypt hashing.
- Implemented risk rules for duplicate invoices, threshold checks, weekend transactions, and high-severity summary analytics.

Flask Real-Time Chat App 2025-2026

Flask, Flask-SocketIO, WebSockets, session authentication

- Built a real-time web app with structured routes, session authentication, MVC-style architecture, and WebSocket user sessions.

Additional Projects 2025-2026

Python, Bash, Unix tools, C++, algorithms

- Built data processing pipelines using Python, grep, awk, sort, and custom extraction/filtering scripts.
- Implemented C++ backtracking scheduler with pruning and optimized data structures to reduce search complexity.

EDUCATION

BSc Computer Science - Leiden University, Leiden 2025-Present

SKILLS

Programming:	Python, C++, SQL
Backend & APIs:	FastAPI, Flask, REST APIs, API integrations, JWT, OAuth2, bcrypt, Swagger/OpenAPI, Postman
Databases:	PostgreSQL, SQLite, SQLAlchemy ORM
Automation & Data:	Excel generation, Mail Merge workflows, data export pipelines, CSV ingestion, business rule logic
Deployment & Tools:	Railway, environment variables, production configuration, Linux/WSL, Bash, Git, Uvicorn
E-commerce:	Bol.com order processing, DPD shipping exports, shipping export workflows
Languages:	Dutch (native), English (native)
